CSE- PDT

Preferred Dental Technologies Inc. (“Company”) (CSE: PDT) Completes R&D in selection and identification of non-precious metal alloy for the EAS

The Evolutionary Accessories Series (EAS) is used to create custom dental abutments for the growing dental implant industry. The current product offering of precious metals can now be supplemented with an economical metal alloy.

The EAS precious metal product currently being marketed, is already attractively priced versus conventional custom dental abutments. Adding this economical alternative to the EAS product line will provide a significant price advantage to currently available custom dental abutments, giving PDT a clear price advantage.

Benefits of the EAS design including ease of producing a custom abutment with superior characteristics is consistent with PDT mandate to deliver a premium product to the industry at an economical price.

Discussions with members of the Board of Advisors have indicated that supplementing the existing precious metal offerings with a non-precious alloy option will greatly enhance the appeal of the system in identified foreign markets.

Selection was determined by identifying which metal alloy would be best suited to the unique characteristics of the EAS, while also researching the most commonly used materials used by dental labs, and coordinating findings with Advisors.

About PDT

Preferred Dental technologies Inc. (PDT) has been established to advance development and commercialization of various evolutionary and disruptive technologies in the dental implant industry.
