Preferred Dental Technologies Inc. (“Company”) (CSE: PDTI, US OTC: PDTTF):

Receives notice of additional patent to be granted by USPTO protecting its 3D process

Preferred Dental Technologies Inc. (PDTI) has received notice from our patent agent that the United States Patent Office (USPTO) has given its intent to grant an additional patent for the EAS Series. This patent covers the 3D application for custom dental implants.

The Company announced its 3D Technology breakthrough November 22, 2017. Readers can access this news release with the following link:

https://prefdent.com/wp-content/uploads/2017/11/PDT.NR_.November.22.2017.pdf

The core EAS Series has been developed with adaptation of material, design, processes and applications in mind, and PDTI has remained committed to additional Research & Development. Protecting these new innovations are an essential part of developing new markets and applications for the EAS Series.

Mr. Erik Siegmund, President, stated, “We are pleased to receive this news from the USPTO. The company has always known that our unique system had design applications beyond the scope of the original patents. We will continue to pursue developments for the digital dental market, as well as non-precious materials as each additional patent provides new intellectual property value in the company’s product portfolio. The United States is obviously a key market for us, and receiving additional Intellectual Property protection as we begin sales activities and additional production formats provides additional security for the company and its shareholders.”

Advisor Rodrigo França, D.D.S, M.Sc, Ph.D. stated "The unique features of the EAS System like control over angulation, easy screw retention and perfect parallelism make this system a game-changer for solving complex cases. The 3D printed prototypes of EAS System is an elegant and avant-garde solution to provide better care to patients"

The Company has a four-part solution for a dental implant mounting system called “Evolutionary Accessory Series” (“EAS”). Misaligned, difficult to solve restorations can be made simple with the EAS utilizing features no other custom dental abutment offers. The EAS system provides a universal platform, and is currently compatible with the following major manufacturers:

Zimmer 2.5 Internal Hex 3.7mm, 4.7mm and 5.7mm

Astra Tech Osseo Speed platforms 30, 40 and 50

3i Osseotite 3.5mm

Straumann SLActive Bone Level NC and RC

Straumann SLA Tissue Level RN and WN

Disruptive Technology for the Global Dental Implant Market
